Introduction

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccups, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation of the subject.

Acupuncture or acupressure at the Neiguan (P6) point, the most frequently used acupoint in the pericardium meridian, has been shown to lessen nausea and vomiting (Dundee *et al.*, 1987, 1988, 1989a and b; Ho *et al.*, 1989; De Aloysio and Penacchioni, 1992; Belluomini *et al.*, 1994; Fan *et al.*, 1997; Harmon *et al.*, 2000). Because nausea and vomiting are also related to autonomic nervous activity (Morrow *et al.*, 1992; Morrow *et al.*, 1999), we speculated that the autonomic nervous activity might be changed when acupuncture at the

P6 point was performed.

Heart rate variability analysis is a useful non autonomic nervous modulation of heart rate. Som vagal modulation, and the restoration of vagal modu

SUPPLEMENTARY INFORMATION

doi:10.1038/nature20584

doi:10.1038/nature20584

Supplementary table 1 | Equations describing the 'Likely water' cluster hull and cluster overlaps in the multidimensional feature-space.

These equations describe the 'Likely water' cluster in the multidimensional feature-space. By definition, part of this cluster contain pixels that are not water, and request additional processing steps to be properly assigned. The method section provides details about the usages of this equations within the expert system classifier.

Name	Description	Equations describing the "Likely water" cluster hull and cluster overlaps in the multidimensional feature-space
water1	Water cluster where NDVI <0	b('value')<0.62&&(((b('hue')<((-9.867784585617413*b('nd'))+238.26034242940045))&&(b('hue')>((- 12960.00000000335*b('nd'))-

自行鍵入與夾帶檔案

資料匯入 – 自行鍵入

自行鍵入愛注意:

 文獻類型[Reference Type]要選擇正確。
 一位作者一行,每位作者皆獨立一行。
 當以英文輸入時,作者姓氏在前要加逗點,如: Wang, Da Min;姓氏在後不用加逗點。同篇書目資料請統一格式。
 單位英文則以「,,」符號標註,如: 「Ministry of Health and Welfare,,」

Compress Library

Compress Library

管理書目資料 – Groups

使用者可以透過EndNote Library中的Groups 功能,分類管理個人EndNote Library中的書目 資料。

※ EndNote 20 可以直接建立 Group囉!

Groups 的三種型態

A child with household transmitted COVID-19 作者: Mao, LJ (Mao, Li-juan) ¹ ; Xu, J (Xu, Jian) ² ; Xu, ZH (Xu, Zhi-hao) ³ ; Xia, XP (Xia, Xiao-ping) ⁴ ; Li, B (Li, Bin) ⁵ ; He, JG (He, Jian-guo) ⁶ ; Zhao, P (Zhao, Peng) ² ; Pan, JW (Pan, Jian-wei) ¹ ; Zhang, D (Zhang, Dan) ¹ ; Su, Y (Su, Yue) ¹ ;更多 BMC INFECTIOUS DISEASES 卷冊: 20 期: 1 DOI: 10.1186/s12879-020-05056-w 出版時間: MAY 7 2020 文獻類型: Article 摘要 BackgroundAlthough people of all ages are susceptible to the novel coronavirus infection, which is presently named "Coronavirus Disease 2019" (COVID-19), there has been relatively few cases reported among children. Therefore, it is necessary to understand the clinical characteristics of COVID-19 in children and the differences from adults.Case presentationWe report one pediatric case of COVID-19. A 14-month-old boy was admitted to the hospital with a symptom of fever, and was diagnosed with a mild form of COVID-19. The child's mother and grandmother also tested positive for SARS-CoV-2 RNA. However, the lymphocyte counts were normal. The chest computed tomography (CT) revealed scattered ground glass opacities in the right lower lobe close to the pleura and resorption after the treatment. The patient continued to test positive for SARS-CoV-2 RNA in the nasopharyngeal swabs and stool at 17days after the disappearance of symptoms. ConclusionThe present pediatric case of COVID-19 was acquired through household transmission, and the symptoms were mild. Lymphocyte counts did not significantly decrease. The RNA of SARS-CoV-2 in stool and nasopharyngeal swabs remained positive for an extended period of time after the disappearance of symptoms. This suggests that attention should be given to the potential contagiousness of pediatric COVID-19 cases after clinical recovery.	 引用文獻網路 於 Web of Science 核心合輯 21 引用文獻 ▲ 建立引用文獻追蹤 所有引用文獻 23 於 所有資料庫 + 查看更多引用文獻 篇被引參考文獻 15 捡週4期目2条
